

TOGETHER WE DEVELOP ARCHITECTURE

79 & Park, Stockholm

- Windows, doors and sliding doors in oak
- Fire elements in oak – all certified according to the latest demands by DBI - The Danish Institute of Fire and Security Technology
- Large glass elements
- Extra deep frames
- High demands for noise reduction

TOGETHER WE DEVELOP ARCHITECTURE

BIG is the architect behind 79 & Park. BIG and Krone Windows have been working together for many years. The split-level building consists of 168 luxury accommodations. The large windows offer residents a beautiful inflow of light and an amazing, undisturbed view.

It was the long-standing co-operation between BIG and Krone Windows that secured the order. BIG knows that Krone Windows can deliver according to their wishes without compromising on architecture or ideas. In this case elements in full stave oak of 2.85 meters in height as well as doors and windows with extra deep frames to withstand the wind load and fulfil the extra demands for noise reduction.

Krone Windows wishes to give the architects as much freedom of design as possible, something which is highly valued by BIG:

"We know Krone Windows as a very reliable supplier, who is interested in developing a building rather than creating limits with standard elements," says partner of BIG, Finn Nørkjær.

Break down habitual thinking. Use SA Concept to create innovative architecture.
